

Seeing, sitting and lying down: Reflections on the role of visual communication in analytic therapy (1er llamado de Diciembre 2017)

Consignas

1. What gap in research does the author identify?
2. What are his main assumptions?
3. Describe the two components identified by Gergely & Watson (1996) and their effect
4. According to Wright (2009), why is the face important and how does it compare to other body parts?
5. What is partial contingency? Why is it important for the infant and for patients in therapy?
6. Discuss the concept of triangulation both with respect to the baby and the patient. How does it differ from mirroring?
7. Why is rupture and repair inevitable both in the case of babies and patients?
8. Why is the “still face” effect mentioned in connection with rupture and repair?
9. What are the reasons to embrace the absence of face-to-face contact in therapy?
10. What do the vignettes included in the paper illustrate?
11. Who was Louis Bourgeois and in what way is her work relevant to the topic of the paper?
