

## Examen 2° llamado Julio 2018

### Individual differences in conflict detection during reasoning

**Answer the following questions:**

1. Describe the hypothetical case the authors introduce. What do they want to prove?
2. What are the dual-process theories? What do they claim?
3. What indicators show the detection of conflict?
4. What aspects of the research gap will this paper address?
5. What are the author's objectives?
6. Refer to what the authors state when they introduce the three studies
7. Describe the materials and procedures for the three tasks given in the first study
8. Select the most salient findings in the individual level analysis
9. What design choices do the authors analyse?
10. Why do the authors think their approach is appropriate?
11. What implications do the authors find from a theoretical and applied perspective?
